

1. Year Groups
Year
5

2. Aspect of D&T Structures

Focus
Frame structures

4. What could children design, make and evaluate?
Longhouse for Vikings and Anglo-Saxons

5. Intended users
Vikings Anglo-Saxons parents children

6. Purpose of products
safety weather protection living
meeting place business recreation

16. Possible resources
photographs, web-based resources of existing frame structures

17. Key vocabulary
frame structure, stiffen, strengthen, reinforce, triangulation, stability, shape, join, temporary, permanent, longhouse,

7. Links to topics and themes
Shape and Space Vikings and Anglo-Saxons Celebrations Outdoors Weather Countries and Cultures Properties of materials

8. Possible contexts
home school gardens leisure culture local community wider environment other – specify

9. Project title
Design, make and evaluate **a longhouse** for **Vikings** for **shelter and living**.

card, paper straws, Lollipop sticks, Dowling wood, square sectioned wood, masking tape, PVA glue pencils, rulers, right/left handed scissors, bench hooks, G-clamp, junior hacksaws, finishing media and materials

design brief, design specification, prototype, annotated sketch, purpose, user, innovation, research, functional

Vikings, Anglo-Saxons, longhouse

3. Key learning in design and technology

Prior learning

- Experience of using measuring, marking out, cutting, joining, shaping and finishing techniques with construction materials.
- Basic understanding of what structures are and how they can be made stronger, stiffer and more stable.

Designing

- Carry out research into user needs and existing products, using surveys, interviews, questionnaires and web-based resources.
- Develop a simple design specification to guide the development of their ideas and products, taking account of constraints including time, resources and cost.
- Generate, develop and model innovative ideas, through discussion, prototypes and annotated sketches.

Making

- Formulate a clear plan, including a step-by-step list of what needs to be done and lists of resources to be used.
- Competently select from and use appropriate tools to accurately measure, mark out, cut, shape and join construction materials to make frameworks.
- Use finishing and decorative techniques suitable for the product they are designing and making.

Evaluating

- Investigate and evaluate a range of existing frame structures.
- Critically evaluate their products against their design specification, intended user and purpose, identifying strengths and areas for development, and carrying out appropriate tests.
- Research key events and individuals relevant to frame structures.

Technical knowledge and understanding

- Understand how to strengthen, stiffen and reinforce 3-D frameworks.
- Know and use technical vocabulary relevant to the project.

10. Investigative and Evaluative Activities (IEAs)

- Children investigate and make annotated drawings of a range of portable and permanent frame structures e.g. tents, bus shelters, umbrellas. Use photographs and web-based research to extend the range
- Children investigate what type of buildings the Anglo-Saxons and Vikings lived in. What purposes were they using the buildings for? What activities did they carry out inside? e.g. How well does the frame structure meet users' needs and purposes? Why were materials chosen? What methods of construction have been used? How has the framework been strengthened, reinforced and stiffened? How does the shape of the framework affect its strength? How innovative is the design? When was it made? Who made it? Where was it made?
- Children could research key events and individuals related to their study of frame structures They could also learn about locally important design and technology activity related to their project.

12. Focused Tasks (FTs)

- Use a construction kit consisting of plastic strips and paper fasteners to build 2-D frameworks. Compare the strength of square frameworks with triangular frameworks. Ask the children to reinforce square frameworks using diagonals to help develop an understanding of using triangulation to add strength to a structure.
- Demonstrate the accurate use of tools and equipment. Develop skills and techniques using junior hacksaws, G-clamps, bench hooks, square section wood, card triangles and hand drills to construct wooden frames, as appropriate.
- Demonstrate skills and techniques for accurately joining framework materials together e.g. paper straws, square sectioned wood. Ask children to practise these, mounting their joints onto card for future reference.

14. Design, Make and Evaluate Assignment (DMEA)

- Discuss the brief of designing and making a small-scale frame structure e.g. *Who is the intended user and what is the purpose of the frame structure? Will it be permanent, or can it be easily dismantled? What materials will you use? How will it be joined? How will it be reinforced? How will it be finished?* Children should be encouraged to generate innovative ideas, drawing on their research. Ask children to develop a simple design specification to guide their thinking.
- Children should produce a detailed, step-by-step plan, listing tools and materials.
- Children's sketches should be annotated with notes to help develop and communicate their ideas.
- Encourage children to model their ideas first using materials such as paper, card and paper straws e.g. *How will you make it stable? How will it stand up? How could you make it stronger? Where are the weak points? How could you reinforce them? What tools and materials will you need? How can you improve the design?*
- Encourage children to make their products with accuracy. They should regularly evaluate their work and their completed product, drawing on their design specification, and thinking about the intended purpose and user.

11. Related learning in other subjects

- **Science** – compare and group together everyday materials based on their properties.
- **Mathematics** – identify 3-D shapes, including cubes and other cuboids, from 2-D representations.
- **Spoken language** – ask relevant questions, formulate and express opinions, give well-structured descriptions and explanations. Use relevant strategies to build their vocabulary.
- **Computing** – use technologies for research purposes and be discerning when evaluating digital content.
- History** – investigate where the Vikings and Anglo-Saxons lived, what materials were used and were available at that time

13. Related learning in other subjects

- Mathematics** – recognise, describe and build simple 3-D shapes. Apply understanding and skill to carry out accurate measuring using standard units i.e. cm/mm.
- Spoken language** – ask relevant questions, formulate and express opinions, give well-structured descriptions and explanations. Use strategies to build their vocabulary.
- History** – Look at the structures of the buildings during Vikings and Anglo-Saxon period

15. Related learning in other subjects

- **Spoken language** – ask relevant questions, formulate and express opinions, give well-structured descriptions and explanations. Use strategies to build their vocabulary.
- **Art and design** – use and develop drawing skills.
- **Mathematics** – apply understanding and skill to carry out accurate measuring using standard units i.e. cm/mm.

18. Key competencies

problem-solving teamwork negotiation
consumer awareness organisation motivation
persuasion leadership perseverance
other – specify

19. Health and safety

Pupils should be taught to work safely, using tools, equipment, materials, components and techniques appropriate to the task. Risk assessments should be carried out prior to undertaking this project.

20. Overall potential of project
